Art Unit: 1761

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 8, 2004 has been entered.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant does not specifically teach "wherein said at least one xylooligosaccharide is not xylose". It is not seen that Page 5 supports this claim language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/050,756

Art Unit: 1761

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimizu et al (JP 10337164 A, JP 09248153 A, and JP 08056607 A) in view of Jager et al (DE 19653354 C1).

Shimizu et al (JP 10337164 A, JP 09248153 A, and JP 08056607 A) all disclose the use of xylooligosaccharides in beverages as is claimed (see corresponding abstracts).

The claims differ as to the use of an intense sweetener.

Jager et al disclose the use of oligoosaccharides to increase the sweetening power and enhance the taste of an acesulfame K/aspartame mixture (see abstract).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use intense sweeteners such as acesulfame K/aspartame as taught by Jager et al in that of any of the Shimizu et al documents because the use of intense sweeteners in beverages is well-known in the art. In addition, the combination of oligosaccharides with intense sweeteners is well-known.

With respect to the limitation as to exclude xylose, it is noted that the selection and manipulation of xylooligosaccharides is well-known and well-within the skill of the

Art Unit: 1761

art. Absent a showing to the contrary, Applicant is using known components to obtain expected results.

Page 4

Once the art has recognized the use of xylooligosaccharides in beverages the use and manipulation of any and all xylooligosaccharides would be no more than obvious to a person of ordinary skill in the art. The prior art clearly teaches the claimed components for the same function as is claimed. Applicant has not established unexpected results.

All of the claim limitations and arguments have been considered. None of them are seen as serving as basis for patentability.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leslie Wong whose telephone number is 571-272-1411. The examiner can normally be reached on Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
